

How to Avoid Data Loss in Microsoft Planner

Work more securely on Microsoft Planner

Microsoft Planner is reliable project management software trusted by thousands of organizations. Project managers must handle a vast array of sensitive data, financial information, and credit card numbers to ensure it doesn't get misused by unauthorized users or lost.

- Mistakes by your employees can result in the loss of critical data.
- A wrong click on a wrong key can delete crucial files and folders.
- Misnaming a file can hamper access to essential data. Sorting this out is time-consuming.
- Data loss causes significant disruption to business while eroding project integrity.
- Finally, you end up losing financially and productively.

It is clear: there is a need to ensure that all company data is protected from getting lost, damaged, or corrupted. The best way is to get a solution providing automated backup and restore.

FluentPro Backup prevents harmful consequences

FluentPro Backup is one of the most popular data loss prevention strategies. It provides automated backup and restore for Microsoft Planner. Using this cloud-based solution, companies have drastically reduced their data loss concerns. FluentPro Backup ensures you always have a recent and reliable backup copy of your crucial data when an accident happens.

- Its cloud-based functionality encrypts all data to guarantee confidentiality.
- Backups are made automatically, on a schedule, or as needed once the system is up and running. You set up how often the system looks for project changes and creates backup versions.
- You can backup project versions and restore them at any time.
- Restoring backup versions means you can revert your environment to the last or previous changes and re-access any lost data.
- You can even save the immediate data state as a version based on your schedule. Then you can use a backup version to restore it for use whenever you record a data loss.

The screenshot displays the FluentPro Backup interface. On the left is a navigation sidebar with sections like 'Home', 'Protection Management', 'Data Protection', 'Backup Schedule', 'Retention Policy', 'Operation Details', 'Credentials', and a list of Microsoft 365 groups. The main area shows 'M365x19509591.onmic... Data Protection' with 245 Plans and 6 Microsoft 365 Groups. Below this is a 'Recent Plans Backups' section with a date range selector. The main content is split into two panels: 'Backup Single Plan' and 'Restore Single Plan'. The 'Backup Single Plan' panel lists several plans with green checkmarks, including 'Apparel ERP Upgrade', 'Audit Tracking Solution', 'Biothermal ear heating system for helmets', 'Catalog Publishing', 'CFO Campaign', and 'Hub'. The 'Restore Single Plan' panel shows a timeline of backups for '4 Mar 2022' and '3 Mar 2022', with green bars and diamond icons indicating successful backup operations. At the bottom, there are filters for 'All Protected', 'Unprotected', and '25 rows', along with tabs for 'All Backups', 'Completed', and 'Failed'.

To sum up, you no longer must worry about hardware failure, file corruption, virus infection, or human errors resulting in data loss. FluentPro Backup allows organizations to set up continuous backup and recover from accidental changes by reverting their specific projects, resources, or groups to an earlier correct version.

Preventing data loss is good for business

Companies that have not discovered how to prevent data loss are exposed to critical productivity and financial losses daily. Statistics indicate that one out of eight organizations has no documented recovery plans. Such organizations lose mission-critical data.

As a result, they cannot complete projects, leaving their clients unhappy and missing out on future projects. Set up FluentPro backup and restore software solution for Microsoft Planner to prevent data loss and maximize profits keeping your business running smoothly.

The screenshot displays the FluentPro Backup dashboard. At the top left is the 'Backup by FluentPro' logo. The top right shows user information for 'Madeleine Smith'. A left-hand navigation menu lists options like 'Home', 'Protection Management', 'Data Protection', 'Backup Schedule', 'Retention Policy', 'Operation Details', and 'Credentials' for two different environments. The main content area shows two environment cards. The first card, for environment 'M365x40727753.onmic...', includes a '+ Add Environment' button and two donut charts: 'Plans Protection' (32 Protected, 18 Unprotected) and 'Microsoft 365 Groups Protection' (23 Protected, 2 Unprotected). The second card, for environment 'M365x19509591.onmic...', shows similar protection metrics.

Benefits of FluentPro Backup

With over 10 years of experience in advancing PPM solutions, FluentPro has created an automated backup and restore solution for Office 365 Planner. FluentPro Backup guarantees organizations numerous advantages:

- ✓ **Risks reduction**, including data loss and human errors.
- ✓ **Reliable protection** for the most crucial data.
- ✓ **Automated continuous backup** of all essential data. The solution saves backup versions when changes are made.
- ✓ **Restore of point-in-time version**. When data loss happens, necessary data version can be restored anytime.
- ✓ **Reduce downtime and save money** by implementing a secure cloud-based backup solution.
