FLUENTPROBACKUP.COM

The New Microsoft Planner is undoubtedly an excellent project tool. It's the latest frontier in enterprise collaborative management, offering users a seamless experience with AI-supported capabilities. Protecting your Planner Premium data becomes more critical as you get more valuable opportunities in managing your projects.

Challenges Associated with Using New Microsoft Planner

PMOs using the New Planner to manage their organization's data face some challenges that risk the security of their sensitive information:

Human errors

The possibility of making errors cannot be ruled out. Your performance will be affected due to data inaccuracies associated with human errors.

Data loss makes it challenging for PMOs to meet their goals. This can result in the wastage of significant business resources to recover the data and do damage control.

Changes in project data.

These modifications might result in unforeseen consequences that necessitate backing up your data for rollback aptitudes.

Compliance obligations.

Organizations are compelled by regulatory standards and legislation within their industry to preserve sensitive business data. Consequently, you need a reliable backup and restore solution to meet this requirement.

FluentPro Backup for New Microsoft Planner Premium Data Protection

[FluentPro Backup for New Planner](#) is a cloud-based platform providing automated continuous backup and restore. When you need to retrieve damaged or deleted data, tap on the backup copy, and it will be available for use.

This solution provides the following features:

- ✔ FluentPro Backup's ability to continually and automatically back up New Microsoft Planner data eliminates the risk of data loss due to human mistakes.
- ✔ Furthermore, because it runs on Microsoft Azure, the solution guarantees that data is encrypted, ensuring reliable security.
- ✔ FluentPro Backup for New Planner also allows you to select which projects to protect. Using this system's automated functionalities, you may back up and recover certain or all your data.
- ✔ PMOs can recover point-in-time copies of the data they're working on. Regardless of how far along you are in your decision-making process, you can always recover the relevant project version when an issue occurs. This way, you can proceed effectively with the task at hand.

How to Back Up the New Planner with FluentPro Backup

You can back up your New Planner Premium using FluentPro Backup in the following steps:

1. Choose the projects to backup.
2. Select backup frequency.
3. Enable automated continuous backup.
4. Back up linked resources, groups, and tasks.
5. Recover projects from a given point in time.

The screenshot displays the FluentPro Backup web interface. At the top, there is a navigation bar with the FluentPro Backup logo, a 'Schedule a call' button, and user information for 'Alex Planner'. The main content area is titled 'My Project for the web Data Protection' and shows statistics: '54 Project Plans', '512 Mb Stored Data', and '1 Gb Processed Data'. A sidebar on the left contains navigation options: Home, My Project for the web, Protection Management, Data Protection, Schedules, Retention Policy, Operation Details, and Credentials. The main area is divided into two panels: 'Backup Single Project' and 'Restore Single Project'. The 'Backup Single Project' panel lists several projects with their protection status: Apparel ERP Upgrade (checked), Biothermal Ear Warming System (checked), Currency Translator Upgrade (checked), E-Commerce Portal Development (unchecked), Audit Tracking Solution (checked), CFO Campaign (unchecked), and Dynamics CRM US Deployment (checked). The 'Restore Single Project' panel shows a timeline from 25 Nov 2021 to 19 Nov 2021, with a zoom slider and a 'Select date range...' button. The timeline displays backup status for each project, with green bars indicating successful backups and red bars indicating failed backups. A legend at the bottom of the timeline shows 'All Backups', 'Completed', and 'Failed'.

Temporarily backup of New Planner Premium data can be performed in Project for the Web backup interface
